604 - 514 - 7430

Open Monday to Friday  
8:00 a.m. to 4:00 p.m.

## What is an acquired brain injury?

An acquired brain injury can also be called an ABI. It is any brain injury that happens after birth. Causes can include infection, disease, limited oxygen, or trauma to the head.

Every person and situation is different. Signs of acquired brain injury and changes in what you can do depend on the area of the brain affected.

It is normal for people with an acquired brain injury to feel more tired. There can also be changes in behaviour and personality. Other changes can include:

- How you think, learn, and plan.
- How you solve problems.
- How you feel.
- What you can do physically.

## What are these services?

If you live at home with an acquired brain injury, we can provide community support services. Services are based on your needs. We help you stay as independent as possible in the community.

If you can no longer be supported at home, we can support you with housing resources.

## Who can take part in services?

To learn more about who can take part, please visit our website.
