

Tummy Time

What is tummy time?

- Placing your baby on their stomach or side when baby is awake.

Why does my baby need tummy time?

- Stops your baby from getting a flat spot on the head (a flat area is called positional plagiocephaly).
- Helps to make muscles strong in your baby's neck, back, chest and arms.
- Helps your baby learn to roll and crawl.
- Gives your baby a new way to look at the world.

Where should my baby have tummy time?

- On your chest or lap.
- On the floor.
- On a firm surface that is safe for baby e.g. an exercise or yoga mat.
- Choose the options that work best for you.

When should my baby have tummy time?

- As soon as your baby is born.
- When your baby is awake and happy.
- When you are watching your baby.
- Many times during the day.

What do I do when my baby has tummy time?

- Get down to baby's level.
- Talk or sing to your baby.
- Show brightly colored pictures or toys to your baby.
- Play peek-a-boo with your baby.

What else can I do to help my baby have a "round" head shape?

- Switch the end where your baby's head is in the crib each day. This encourages your baby to turn his or her head a different way to look at people or things in the room.
- Do not use head supports in car seats, cuddle seats, baby swings, strollers or cribs.
- Put your baby in a car seat, swing or stroller for only a short time.

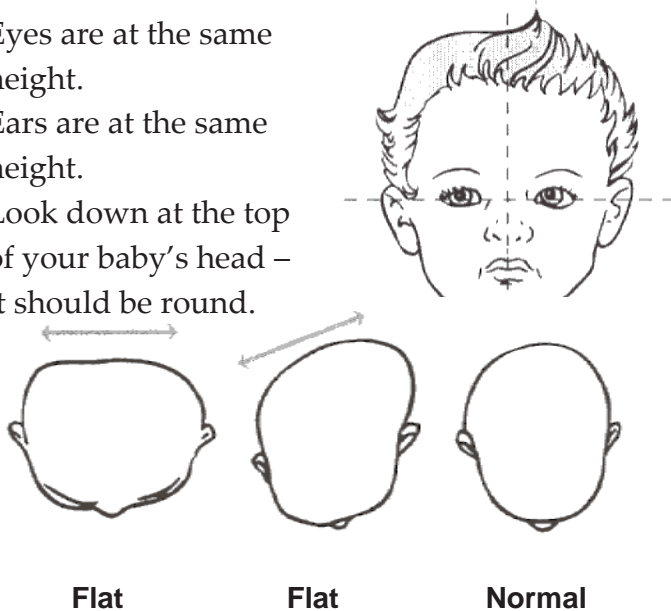

What can I do if my baby doesn't like tummy time?

- Be patient.
- Your baby may be fussy and may need your help to learn to like tummy time.
- Make this time as much fun as you can.
- You can put a rolled up towel under your baby's chest and prop his arms in front of the towel, once your baby can hold his head up.

Tummy Time - *continued*

How do I know if my baby has a “round” head shape?

- Eyes are at the same height.
- Ears are at the same height.
- Look down at the top of your baby’s head – it should be round.

What should I do if my baby gets a flat area on the head?

- Follow the tips for tummy time.
- Place your baby so that his head does not rest on the flat area.
- Speak with your doctor or public health nurse.
- Be patient – it can take months before you see a change.

Remember!
**A baby should sleep on their back
on a firm surface**

Why can a baby get a flat area on the head?

- From baby’s position in pregnancy and birth.
- From spending long periods of time in a stroller, car seat, or baby swing.
- Skull bones can flatten if the baby always rests on the same area on the head.
- Babies’ skulls change shape the most in the first year of life.

Will a flat area on the head hurt my baby’s brain?

- Usually not.
- A small amount of head flattening will resolve by itself.

Where can I get more information?

Call your local Public Health Unit, Doctor, or Health Link BC at 811.
