

# Window safety tips to protect kids from falls

Window screens keep bugs out, not children in. Children can easily push through and fall.

Install window locks or other devices that limit opening so that windows don't open more than 10 centimetres.

Always supervise children around open windows. Many children can climb before they can walk.

Place furniture away from windows to discourage children from climbing.

# Tips to make your home more secure for children and prevent devastating falls

**Install window and door safety locks.** These safety features prevent windows from opening more than 10 centimetres (4 inches). Children can fit through spaces as small as 12 centimetres (5 inches) wide. Make sure there is a safe release option in case of a house fire.

**Move furniture away from windows.** This can discourage children and toddlers from using objects like a step stool to climb and look out.

**Window screens keep bugs out, not children in.** Most screens pop out easily, allowing children to push through and fall. Toddlers can easily fall headfirst through a window screen if they lean against it.

**Install window guards on windows above the ground level.** These can act as a gate in front of the window.

**Children often begin climbing before they can walk.**

**Don't leave children unattended on balconies or decks.** Move furniture or planters away from the edges as children can climb up and over.

**Talk to your children** about the dangers of opening and playing near windows, particularly on upper floors of the home.
